<Course Code>					<Mathematics – I>					
Teaching Scheme					Examination Scheme					
L	T	P	C	Hrs./Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
3	1	0	4	4	25	50	25	--	--	100

COURSE OBJECTIVES

1. To be able to evaluate problems related to differential and integral calculus of complex functions.
2. To be able to obtain area, volume using integral calculus.
3. To be able to formulate and solve various engineering problems using the calculus.
4. To study the properties of sequence and series and to check the convergence and divergence.

UNIT I: DIFFERENTIAL CALCULUS AND ITS APPLICATIONS **08 Hrs.**

Partial derivative and its application - Euler's theorem - Total derivatives - Jacobians – Maxima and Minima of two variables using Lagrange's multipliers. Taylor's series, Convergence of power series.

UNIT II: INTEGRAL CALCULUS AND ITS APPLICATIONS **12 Hrs.**

Definition and evaluation of double integral (Cartesian – Polar form) – Change of orders - Change of variables – Evaluation of triple integral, change of variables (Cartesian to spherical – and cylindrical) – Applications, area – volume – center of mass – center of gravity by double and triple integral.

UNIT III: VECTOR CALCULUS **10 Hrs.**

Gradient, divergence and curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector Integration – Simple problems on line, surface and volume integrals – Green's theorem in a plane, Gauss divergence theorem and Stokes' theorem (without proofs) – Simple application involving cubes and rectangular parallelepipeds.

UNIT IV: SEQUENCE AND SERIES **12 Hrs.**

Definition. Convergent, divergent, bounded & monotone sequences. Infinite sums: Basics Taylor series, Convergence and divergence, Tests for convergence for positive term series, Alternating series – Leibnitz test, Absolute convergence, conditional convergence.

TOTAL HOURS: 42 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to:

CO1 : Identify the use of convergence of infinite series in engineering aspects.
CO2 : Understand the concept of Directional derivative, Irrotational and Solenoidal vector fields.
CO3 : Apply the concept of differential and integral calculus in engineering problems.
CO4 : Analyze the obtained solution in linear and non-linear domains.
CO5 : Appraise mathematical problems from complex domain.
CO6 : Evaluate problems on Green's, Stokes' and Divergence theorems.

TEXT/REFERENCE BOOKS

1. B. S Grewal, Higher Engineering Mathematics, Khanna Pub.
2. R. K. Jain and S. R. K. Iyengar, Advanced Engineering Mathematics, Alpha Science.
3. Erwin Kreyszig, Advanced Engineering Mathematics, John Wiley.
4. G. Strang, Linear Algebra and its Applications, Cengage Learning.
5. K. Hoffman and R. A. Kunze, Linear Algebra, Prentice Hall of India.

Teaching Scheme					Engineering Physics Examination Scheme					
L	T	P	C	Hrs/Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
3	0	0	3	3	25	50	25	--	--	100

COURSE OBJECTIVES

- To master the concepts of vector algebra and the fundamentals of mechanics
- To explore the principles of elasticity in solids, band theory of solids and the Physics of semiconductors.
- Investigate the behavior of waves and oscillations, along with their applications in acoustics and ultrasonics.
- Gain insights into thermal physics, covering conduction, convection, and radiation, and their practical applications.

UNIT 1 Mechanics	**12 Hrs.**
Introduction to vector algebra, Vector fields and scalar fields, Concepts of gradient, Divergence and Curl, Gauss-Divergence Theorem, Stokes' theorem and its applications, The everyday forces of Physics, Work-energy theorem, Rigid body motion and the conservation of angular momentum, Center of mass, Center of gravity, Moment of inertia: Definition, Moment of inertia of simple planar laminas.	
UNIT 2 Physics of Solids	**10 Hrs.**
Elasticity, Stress & Strain, Hook's law, Young's modulus, Poisson's ratio, Rigidity modulus, Relationship between elastic constants, Properties of solids, electrical conductivity, Wiede-mann Franz Law, Band structure of conductor, insulator and semiconductor, Intrinsic and extrinsic semiconductor, Conductivity of semiconductors, charge concentrations, Hall effect, LED and Solar cells, Magnetism and its origin, Magnetic properties of solids, Physics of superconductors, Applications.	
UNIT 3 Waves, Oscillations and Acoustics	**8 Hrs.**
Waves and oscillations: Types of waves, Simple harmonic motion, Damped simple harmonic motion, types of damping, Forced oscillation, Resonance, Energy Transport in Wave motion. Acoustics & Ultrasonic: Introduction to Sound, Sabine's reverberation theory, Acoustical defects and their remedies, Doppler Effect, Ultrasonic waves, Methods of their generation and detection, Properties and applications of ultrasonic waves.	
UNIT 4 Thermal Physics	**12 Hrs.**
Thermodynamic systems (closed and open), Thermodynamic properties and equilibrium, Concepts of heat and work, Laws of thermodynamics, Carnot cycle, Heat transfer-thermal expansion of solids and liquids, Conduction in solids, Thermal conductivity, Forbe's method, Lees' disc method, Thermal insulation and its applications, Thermal Convection and its applications, Newton's law of cooling, Thermal Radiation – emission and absorption radiation, emissive power, Black body radiation, Stefan's laws, Wien's law.	
	Max. <42> Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 Describe fundamental concepts of mechanics, such as vector algebra, everyday forces of Physics, Moment of inertia, etc.
CO2 Explain the principles underlying the physics of solids, including elasticity and the behavior of energy bands.
CO3 Solve problems involving mechanics, solids, waves, oscillations, and acoustics
CO4 Analyze the behavior of waves, oscillations, and thermal phenomena, including their practical applications
CO5 Critically evaluate the significance of thermodynamic laws and superconductivity theories in solving real-world problems.
CO6 Develop solutions and innovative applications in mechanics, solids, waves, and thermal physics by integrating concepts and principles learned throughout the course.

2. D. Halliday, R. Resnick, J. Walker, Fundamentals of Physics, John Wiley & Sons.
3. Sears and Zemansky, University Physics, Pearson publications.
4. M. N. Avadhanulu, P.G. Kshirsagar, A textbook of Engineering Physics, S Chand & Co. Ltd.
5. F. M. A. Wahab, Solid State Physics: Structure and Properties of Materials, Narosa Publishing House Pvt. Ltd.
6. Richard, Oscillations and Waves: An Introduction, Taylor & Francis.
7. Y. A. Cengel, Introduction to Thermodynamics and Heat Transfer, Tata McGraw-Hill.
8. B. Lal and N. Subramaniyam, Heat and Thermodynamics, S Chand & Co. Ltd.

END SEMESTER EXAMINATION QUESTION PAPER PATTERN

Max. Marks: 100 **Exam Duration: 3 Hr.**

Part A: 10 Questions each carrying 5 marks	50 Marks
Part B: 5 Questions each carrying 10 marks	50 Marks

Teaching Scheme					Engineering Physics Laboratory Examination Scheme					
L	T	P	C	Hrs/Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	Viva	
0	0	2	1	2	-	-	-	50	50	100

COURSE OBJECTIVES

- To comprehend the operation of diverse electrical, mechanical, and optical instruments utilized within the laboratory setting.
- To grasp fundamental principles of Physics and apply them effectively in the execution of experiments.
- To acquire hands-on experience in Physics through experimental work, fostering practical understanding.

List of Experiments

1. To determine the acceleration due to gravity 'g' using a simple pendulum.
2. To determine the acceleration due to gravity 'g' using a bar pendulum.
3. To determine the electrical conductivity of metals.
4. To study the characteristics of Si solar cells.
5. To explore the usage of Digital Oscilloscope.
6. To study the phenomenon of photoconductivity using CdS photo-resistor.
7. To determine linear thermal expansion coefficient of solid bodies.
8. To study the phenomenon of Hall Effect.
9. To determine volumetric coefficient of expansion of liquids.
10. To study the reflection of ultrasonic waves.
11. To demonstrate/investigate resonance in forced oscillations.
12. To study the principle of heat pump.
13. To determine energy band gap of semiconductor using four probe method.
14. To measure the slit width of single, blade and double slits.
15. To determine e/m using Thomson's method.

** Any 10 experiments will be conducted.

COURSE OUTCOMES

On completion of the course, the students will be able to

CO1 - Apply mathematical reasoning to analyze the concepts of mechanics.
CO2 - Compare and contrast experimental results to determine electrical and thermal conductivity.
CO3 - Demonstrate and implement the concepts of waves and oscillations.
CO4 - Investigate the electrical properties of a given semiconductor device.
CO5 - Examine the charge transport mechanism in different conductors.
CO6 - Analyze the behavior of waves, oscillations, and thermal phenomena in experiments.

6. Brij Lal, N. Subrahmanyam, Heat and Thermodynamics, S. Chand & Company, Ltd

Evaluation

Max. Marks: 100

Continuous evaluation	50 marks
End semester examination and Viva-voce	50 marks

Teaching Scheme					ENVIRONMENTAL SCIENCE					
					Examination Scheme					
L	T	P	C	Hrs./Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
2	0	0	2	2	25	50	25	--	--	100

COURSE OBJECTIVES

1. To develop a comprehensive perspective of environment and sustainable development
2. To understand the causes and effects of various types of pollution
3. To develop an understanding of the various strategies for controlling the pollution
4. To introduce the emerging environmental domains

UNIT I : INTRODUCTION TO ENVIRONMENT **05 Hrs.**

Sustainable Development; Sustainable Development Goals; Environmental Studies – Its importance and Multidisciplinary nature, Introduction to Environmental Parameters and their standards (air, water, soil, noise, etc.); Ecosystem and its types, Ideal ecosystem, Biodiversity : Its importance and conservation.

UNIT II : MULTI-SCALE ENVIRONMENTAL POLLUTION (GLOBAL, REGIONAL AND LOCAL) **06 Hrs.**

Pollution, Causes and Effects of different types of pollution : Air Pollution, Water Pollution, Soil Pollution, Solid Waste (organic and Inorganic) Pollution, Hazardous Waste Pollution, Marine Pollution, Noise Pollution, Thermal Pollution, Radioactive Pollution; Introduction to man-made disasters like floods, heat waves, landslides, etc., Introduction to the various instruments for measuring air pollution, water pollution, noise, etc.

UNIT III : ENVIRONMENTAL POLLUTION CONTROL STRATEGIES **09 Hrs.**

Multi-approaches for reducing various types of pollution: Introduction to Water and Wastewater treatment technologies, Air and Noise pollution control techniques, Introduction to different environmental management concepts like Swachh Bharat Mission, Mission LiFE (Lifestyle For Environment), etc. Indian Culture and Traditional Wisdom for managing environment

UNIT IV: EMERGING ENVIRONMENTAL MANAGEMENTS DOMAINS **08 Hrs.**

Concept of Zero Liquid Discharge (ZLD) and the reuse of the treated wastewater, Green Credit Rules - 2023, Clean Development Mechanisms (CDM) and Carbon Credits, Green Buildings, Carbon Footprint and Water Footprint, Green Business, International Environmental Laws, Environmental Auditing, Smart Technology.

TOTAL HOURS: 28 Hrs.

COURSE OUTCOMES:

CO-1: Demonstrate comprehension of sustainable development and environmental aspects.

CO-2: Recognize the interdisciplinary characteristics inherent in Environmental studies.

CO-3: Evaluate the impact of various pollutants on the environment.

CO-4: Assess the efficacy of different technologies for environmental pollution control.

CO-5: Analyze different environmental management policies and their implications.

CO-6: Synthesize knowledge about emerging environmental management paradigms.

TEXT-BOOK AND REFERENCE BOOKS:

1. Bharucha Erach, Textbook for Environmental Studies, UGC New Delhi
2. Daniel B. Botkin & Edwards A. Keller, Environmental Science, Wiley INDIA edition.
3. Miller T. G. Jr., 2006. Environmental Science, Clengage Learning, India
4. R. Rajagopalan, Environmental Studies, Oxford University Press
5. Gilbert Masters and Wendell P. Ela, 2012. Introduction to Environmental Engineering and Science, PHI Learning Pvt Ltd, New Delhi

<Course Code>					Workshop Practice					
Teaching Scheme					Examination Scheme					
L	T	P	C	Hrs/Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
0	0	2	1	2	--	--	--	50	50	100

COURSE OBJECTIVES

1. To understand safety in various manufacturing processes.
2. Learn how to use various measuring tools for engineering applications.
3. Hands on training and preparation of job using wood, metal and sheet as per drawing.
4. Understand various manufacturing processes like machining, welding, soldering and 3D printing for prototypes.

LIST OF EXPERIMENTS

1 Introduction to Workshop safety, layout and identification of various materials- plastic, wood, metals-ferrous and nonferrous, rubber, glass etc.
2 Use of measuring tools for engineering applications
3 Fitting job: Detailed drawing of work piece, use of fitting tools and job preparation.
4 Carpentry job: Detailed drawing of work piece, use of carpentry tools and job preparation.
5 Sheet metal job: Detailed drawing of work piece, use of sheet metal working tools and job preparation.
6 Plumbing job: Internal/External threading, piping network using Tees, Elbows, Reducer, Bends etc
7 Hands on training on mini lathe and milling machine
8 Demonstration of welding, brazing and soldering
9 Soldering and desoldering for PCB
10 3D printing using polymer and metal.

COURSE OUTCOMES

On completion of the course, student will be able to:

CO1 : Define workshop safety and various engineering materials
CO2 : Understand various measuring equipment
CO3 : Apply various workshop tools in preparing job for carpentry, fitting, sheet metal and plumbing
CO4 : Examine various manufacturing operations like welding and machining
CO5 : Evaluate soldering operation for PCB
CO6 : Create prototype using 3D printing

<Course Code>					Biology For Engineers					
Teaching Scheme					Examination Scheme					
L	T	P	C	Hrs./Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
2	0	0	2	2	25	50	25	--	--	100

COURSE OBJECTIVES

1. To understand the basic biological concepts and their engineering applications.
2. To introduce the students with an understanding of biodesign principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To study the development of interdisciplinary vision of biological engineering.

UNIT I: INTRODUCTION TO BIOMOLECULES **7 Hrs.**

Cell as a basic unit of life, prokaryotic and eukaryotic cells, microbes, plant and animal cells; Cell organelles – structure and function; Cell membrane. Vitamins and Minerals, Carbohydrates, Lipids, Amino Acids and proteins, Nucleic Acids (DNA and RNA).

UNIT II: NATURE-BIOINSPIRED MECHANISMS **7 Hrs.**

Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics). The eye functions as a camera. Heart as a pump system, The ear and nose as signal transmission models. Lungs operate as an exchange model, kidneys function as a filtration system. Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro).

UNIT III: TRENDS IN BIOENGINEERING **7 Hrs.**

Stem cell and its applications, Bio printing techniques and materials. Applications of Bioinformatics, Artificial Intelligence for diagnosis and detection of communicable and non-communicable diseases, Biosensors in healthcare, Environmental monitoring, Food Safety and Biosecurity.

UNIT IV: ENGINEERING PERSPECTIVES OF BIOLOGICAL SCIENCES **7 Hrs.**

Biology and engineering crosstalk – At cell level: Hybridoma technology, At tissue level: Plant Tissue Culture, Animal Tissue Culture; Tissue Engineering, Introduction to Biomimetics and Biomimicry, Nanobiotechnology, Introduction to Radiology, High-throughput diagnostics in clinics: Molecular Diagnostics (PCR), DNA chips.

TOTAL HOURS: 28 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to:

CO1 : Gain fundamental knowledge of origin of life.
CO2 : Demonstrate the involvement of major organs and systems in the human body as models for bioengineering design.
CO3 : Analyse the scope and opportunities of Implementing bioengineering concepts relates to advanced imaging and diagnostic techniques for clinical diagnosis and disease management.
CO4 : Get acquainted with concepts of bioengineering trends including biosensors, AI , Imaging techniques in disease diagnosis and treatment
CO5 : Focus on implications of Bioinspired designs, Bioengineering trends including, tissue engineering and molecular diagnostics.
CO6 : Think critically towards exploring innovative biobased solutions for socially relevant problems.

<Course Code>					Introduction to Computer Programming -I (For ME/CH/CL/BT)					
Teaching Scheme					Examination Scheme					
L	T	P	C	Hrs/Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
1	0	0	1	1	25	25	50	--	--	100

COURSE OBJECTIVES

1. To develop a greater understanding of the issues involved in programming language, design and implementation.
2. To inculcate functional and logical problem-solving skills through programming.
3. To understand the basic concepts of C programming.

UNIT 1: Basics Of C Programming **2 Hrs.**

History and significance of C, Anatomy of a C program, Input, Output constructs, built-in data types in C: int, float, char, types of Operators, Operator precedence and associativity.

UNIT 2: Control Flow and Functions **4 Hrs.**

Control Structures – if, if-else, if-elseif ladder, nested if, switch statement, and Loop Structure- for loop, while loop, do-while loop. Built-in functions, User defined functions, Parameterized Vs Non-Parameterized functions, function return values, nested functions

UNIT 3: Arrays, Strings, Pointers **5 Hrs.**

Declaration and initialization of arrays, Accessing array elements, One-dimensional, Two-dimensional and Three-dimensional arrays, String operations on Character arrays, In-built String functions, Pointer, Pointer arithmetic, Pointer to pointer, Array of Pointers

UNIT 4: Structures and File Handling **3 Hrs.**

Declaring a Structure, Accessing Structure Elements, Array of Structures, Basic file operations, File creation, File deletion, File access modes such as read, write, append, File concatenation, File handling using seek function.

14 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to:

CO1 - Understand basics of programming.
CO2 - Identify different programming constructs for a problem.
CO3 - Apply appropriate derived data type for data storage.
CO4 - Prepare a user defined data type based on data attributes.
CO5 - Construct user defined functions for problem solving.
CO6 - Analyse different data structure based on application requirement.

TEXT/REFERENCE BOOKS

1. Kernighan & Ritchie, C Programming Language, PHI
2. K. N. King , C Programming: A Modern Approach, W.W. Nortorn
3. David Griffiths and Dawn Griffiths, Head First C: A Brain-Friendly Guide, O'Reilly.
4. E.Balaguruswamy, Programming in ANSI C, McGraw-Hill.
5. Y.P. Kanetkar, Let us C", BPB Publication.
6. Y.P. Kanetkar, Pointers in C, BPB Publications.

<Course Code>					Introduction to Computer Programming -I Laboratory (For ME, CL, CH, BT)					
Teaching Scheme					Examination Scheme					
L	T	P	C	Hrs/Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
0	0	2	1	2	-	-	-	25	25	50

COURSE OBJECTIVES

1. To understand the basic concepts of C programming
2. To understand design and implementation issues involved with variable allocation and binding, control flow, types, subroutines, parameter passing
3. To develop understanding of Compilation process.

LIST OF EXPERIMENT

1. **Introduction to Computer Programming**: Compilation process of a C program, program execution flow, Tokens, variables, keywords and identifiers.
2. **Simple and formatted Input Output Operations:** Data types, Operators, Input /output statements in C, Formatted I/O, format specifiers, escaper sequences
3. **Decision making and branching:** if, if-else, if-else ladder, nested if, Switch, go to statement, conditional operator statement
4. **Looping control structures:** while, do-while, for loop, Break statement, Continue statement
5. **Basics of modular programming:** Introduction to modular programming through basic function syntax, introduction to header file creation, difference between #include <filename> and #include "filename"
6. **Array and Strings:** One dimensional and multidimensional array, Declaration, initialization, Array Manipulations. Matrix operations,
7. **Introduction to Pointers:** Pointer declaration and initialization, Pointer operators, Arithmetic operations using pointer.
8. **Structure and Union:** Structure, Arrays and structures, structures and functions, pointer to structure, self-referential structures, typedef, unions
9. **Functions:** Introduction to user defined functions, Types of Functions, Call by value, Call by reference
10. **File Handling in C:** File handling in C, Different types of files, Operations on Files, File handling functions.

COURSE OUTCOMES

On completion of the course, student will be able to

CO1 - Identify the use of appropriate naming conventions and programming style including appropriate comment density.
CO2 - Implement a basic C program using appropriate control structure.
CO3 - Apply appropriate derived data types based on data attributes.
CO4 - Develop the problem solution modularly.
CO5 - Design user defined functions for problem solving and reuse them across different programs.
CO6 - Apply suitable file handling and data structures.

<Course Code>					Universal Human Values					
Teaching Scheme					Examination Scheme					
L	T	P	C	Hrs./Week	Theory			Practical		Total Marks
					MS	ES	IA	LW	LE/Viva	
1	0	0	1	1	25	50	25	--	--	100

COURSE OBJECTIVES

1. To understand the need of nurturing human values through the process in value-based education system.
2. To understand and develop a holistic perspective on self-exploration and being in harmony with family, society and nature.
3. To facilitate the students in understanding harmony at all the levels and applying in their profession and work place to lead an ethical life.

UNIT I: HUMAN VALUES AND PROCESS OF VALUE EDUCATION **04 Hrs.**

Human values, human aspirations and the ultimate goal, understanding happiness and prosperity, appraise the meaning of satisfaction and happiness in current scenario, harmony and compatibility, values imbibed education system and process

UNIT II: KNOWING SELF - HARMONY WITH SELF **04 Hrs.**

Understanding self, capabilities and challenges, understanding material (physical facilities) and spiritual needs - need of mind and body, understanding body as an instrument, harmony between mind and body, synchronizing physical health and mental health, practicing healthy habits for healthier me

UNIT III: HARMONY IN RELATIONSHIP – FAMILY, SOCIETY AND NATURE **03 Hrs.**

Harmony in relationships, values for harmony in any human-human interaction, harmony in family, and society, trust and respect for others, self esteem and ego, equality, equity, inclusion and liberation, concept of '*Vasudhaiva Kutumbakam',* understanding co-existence and sync with nature

UNIT IV: HARMONY IN PROFESSION AND ETHICAL BEHAVIOR **03 Hrs.**

Ethical human conduct, acceptance and respect, appraising the qualities of others, professional competence for enabling harmony in system and enabling universal human order, scope of eco-friendly systems, strategies to reach the harmonious ecosystem to reach Universal Human Order '*Sarvabhauma Vyavastha'*

TOTAL HOURS: 14 Hrs.

COURSE OUTCOMES

On completion of the course, student will be able to:

- CO1 - Understand the significance of human values, its need, and process of value education.
- CO2 - Appraise the meaning of happiness and prosperity as short- and long-term goal of life. Understand them and in context of the current scenario
- CO3 - Distinguish between the mind and body, physical and spiritual wellbeing for harmony within self
- CO4 - Assess the value of harmonious relationship based on trust, respect and enduring its role in all human-human relationships to build harmonious society
- CO5 - Understand the importance of harmony with nature and appreciate co-existence for harmonious ecosystem.
- CO6 - Create the perfect professional place and work environment following the ethical practices and strategize to uphold the human values at all the levels and interactions.
